March 2024

Built automation systems using generative AI that integrates with developers workflow to increase productivity.

PROJECTS -

Foodie – food ordering app

Link – https://github.com/ayushb02/food_ordering

Foodie is created using react and firebase. The main motive to create foodie is to understand how does modern E-commerce web apps function. All the data is pulled from the Swiggy API and firebase is used for authentication and storing user data

EasyPay – money transaction app

Link – <https://github.com/ayushb02/EasyPay>

EasyPay is created using express ,mongodb and react. It is a backend heavy money transaction application like paytm. Which create and maintain multiple bank accounts.

PR review Automation – PR reviewing using AI

Link – https://github.com/ayushb02/PR_automation

PR Reviewer is an open-source project that automates the initial review process for GitHub Pull Requests. Leveraging LLMs, it analyzes PR text and comments, providing feedback and even approving or requesting changes. By integrating PR Reviewer into your development workflow, you can save time and ensure adherence to project guidelines.
